## **Disclaimer Notice**

THIS ANSYS SOFTWARE PRODUCT AND PROGRAM DOCUMENTATION INCLUDE TRADE SECRETS AND ARE CONFIDENTIAL AND PROPRIETARY PRODUCTS OF ANSYS, INC., ITS SUBSIDIARIES, OR LICENSORS. The software products and documentation are furnished by ANSYS, Inc., its subsidiaries, or affiliates under a software license agreement that contains provisions concerning non-disclosure, copying, length and nature of use, compliance with exporting laws, warranties, disclaimers, limitations of liability, and remedies, and other provisions. The software products and documentation may be used, disclosed, transferred, or copied only in accordance with the terms and conditions of that software license agreement.

ANSYS, Inc. and ANSYS Europe, Ltd. are UL registered ISO 9001: 2015 companies.

## **U.S. Government Rights**

For U.S. Government users, except as specifically granted by the ANSYS, Inc. software license agreement, the use, duplication, or disclosure by the United States Government is subject to restrictions stated in the ANSYS, Inc. software license agreement and FAR 12.212 (for non-DOD licenses).

## **Third-Party Software**

See the [legal information](#) in the product help files for the complete Legal Notice for ANSYS proprietary software and third-party software. If you are unable to access the Legal Notice, contact ANSYS, Inc.

# ANSYS ACT 2020 R2 Known Issues and Limitations

This document lists known issues and limitations in the ACT 2020 R2 release.

## Note:

- This document might contain entries that do not appear in “Known Issues and Limitations” in the *ACT Developer’s Guide* because they were found after this guide’s publication.
- For known issues and limitations specific to Mechanical APIs, see “Mechanical API Known Issues and Limitations” in the *Scripting in Mechanical Guide*.

## ACT panels may not fill entire dialog width

Some ACT panels, such as the **ACT Console** and **ACT Debugger**, may not "spring" the entire width of the parent dialog. Panel behavior and user interaction are unaffected.

## Reloading a Workbench extension while in use

A Workbench extension can define new systems to insert in the **Project Schematic**. Reloading such an extension after creating new system instances will result in unexpected behavior. Before reloading, delete all extension-related systems or save and reset the project.

## Images in HTML components do not display unless the file URL protocol is used

An image in an HTML component does not display unless the file URL protocol (`file:///`) is placed before the file path. In previous versions, an absolute path could be used to display an image in an HTML component:

```
img src="c:/Users/User1/myimage.jpg"
```

However, now the `file:///` protocol must be placed before the file path:

```
img src="file:///c:/Users/User1/myimage.jpg"
```

## After installation, the ACT Start Page sometimes appears blank

If after installing ANSYS products, you see that the **ACT Start Page** is blank, right-click inside the blank window and select **Reload**.

## VPN conflicts can arise if IP information is retained

When using a VPN, IP information can be retained, even after turning off the VPN and rebooting the computer. The workaround is to release the IP configuration using the following script:

```
echo Releasing IP
ipconfig /release > NUL
echo Acquiring new IP
ipconfig /renew > NUL
```

## Enabled FIPS security policy

When running with an enabled FIPS security policy, ACT User Interface elements are not supported.

## Workbench customization

When using ACT to create Workbench custom workflows, not all optional attributes for the tag `<property>` are currently supported. For example, `visibleon` is not supported.

## For DesignModeler, the ACT Console, Extensions Log File, and ACT wizards are supported on Windows platform only

For DesignModeler, the **ACT Console**, **Extensions Log File**, and ACT wizards are supported only when DesignModeler is running on the Windows platform.

## ACT for Fluent is supported on Windows platform only

When using ACT for Fluent customization, ACT is supported only when Fluent is running on the Windows platform.

## ACT Debugger and App Builder are supported on Windows platform only

The **ACT Debugger** is supported only on the Windows platform from the **Project** page in ANSYS Workbench and from DesignModeler and Mechanical. The **ACT App Builder** is supported only on the Windows platform.

## Limited ACT localization support

Localization of ACT is limited to the languages currently supported in ANSYS Workbench. This limitation does not apply to the ability to manage various languages within the extension. For example, the property names created by an extension do not have to be in the same language as the current activated language in Workbench.

There is no mechanism to integrate localization for the property names defined by an extension. To manage different languages for your property names, you must develop localization yourself. Both regional settings based on the "." or the "," decimal symbol are available. However, the implementation of the extension should use the "." symbol for any value defined at the XML or IronPython level.

## Default location of ACT extensions for SpaceClaim

The default location in which SpaceClaim is to look for ACT extensions is `%ANSYSversion_DIR%\scdm\Addins`. However, SpaceClaim is not currently recognizing this location. Workarounds include either installing extensions in `%APPDATA%\Ansys\v202\ACT\extensions` or using the gear icon on the graphic-based **Extension Manager** accessed from the **ACT Start Page** to add the folder for the default location or the folder to which you installed the extension.

## Mechanical read-only mode

ACT does not support Mechanical read-only mode. If you launch Mechanical and see read-only mode, avoid interactions with ACT extensions and features as changes could result in unexpected application behavior.

## Captions for custom objects cannot contain a space followed by a number

When renaming a caption for a custom object, do not follow a space with a number. While no error appears, the caption is not renamed. **Workaround:** When renaming a caption for a custom object, always follow a space with a non-numeric character before using a number. For example, rather than renaming a caption to "my custom object 2", rename it to "my custom object n2".

## ExtAPI.Extension.Attributes does not support OrderedDict values

When `ExtAPI.Extension.Attributes` is used to store a value of type `OrderedDict`, an empty dictionary is stored instead of the supplied value.

## Saving dictionaries in attributes slows the opening of Mechanical significantly

When loading a project with custom ACT objects whose attributes have been filled with dictionaries, it takes Mechanical much more time to open. In cases where these dictionaries are very large, Mechanical may be unable to recreate results as ACT results, displaying user-defined results instead.

## Accessing UserInterface on ExtAPI in Mechanical from an onInit callback or globally causes errors

Accessing `UserInterface` on `ExtAPI` in Mechanical from an `onInit` callback or globally causes errors to be thrown in the **Extensions Log File**, resulting in instability. **Workaround:** Access `UserInterface` from an `onload` callback or any place other than the `onInit` callback. Keep in mind that an `onLoad` callback is invoked only when Mechanical is started. Reloading an extension using the button in the GUI will not invoke an `onLoad` callback.

## Electronics Desktop module CoreGlobalScriptContextFunctions unavailable

The Electronics Desktop module `CoreGlobalScriptContextFunctions` is unavailable in ACT. The following functions are available only through the **Command** window in Electronics Desktop:

- `AddErrorMessage`
- `AddFatalMessage`
- `AddInfoMessage`
- `AddWarningMessage`
- `LogDebug`
- `LogError`

As alternatives, you can use the following:

- `oDesktop.AddMessage`
- Python logging functionality (for example, `"import logging"` and use the logging module)

## Limitations Unique to Linux

If you are running on Linux, you should be aware of the following limitations:

### Starting the ACT Start Page can cause an unexpected shutdown

When you start the **ACT Start Page** on Linux, an unexpected shutdown can occur. On some Linux operating system variants such as Red Hat, removing the package `totem-mozplugin` resolves the issue:

```
yum remove totem-mozplugin
```

### ACT App Builder is not available on Linux platforms

The ACT App Builder is not available on Linux platforms. It is, however, available on Windows platforms.

### Some Linux versions contain a JPEG library that conflicts with the ANSYS package

In some Linux versions, a JPEG library conflicts with the ANSYS package. When using ACT wizards with JPEG images, this conflict can produce a SIGSEV error and an application crash. If this occurs, you can convert your images to other file formats such as GIF or PNG.

### Graphics API issues in ANSYS DesignModeler and Mechanical when no extensions are loaded

When no extensions are loaded, there are some limitations on the `Graphics` API from the **ACT Console** in ANSYS DesignModeler and Mechanical. For instance, the `Factory2D` does not work. Therefore, you should load one or more extensions before using the `Graphics` API from the **ACT Console**.
