

ANSYS

ANSYS Seminar: Engineering Simulation for the Alberta Oil & Gas Industry

Expansion of Alberta oil sands production is inspiring new technology that will improve oil extraction. The innovations in new equipment and processes will increase production efficiency and with greater focus on environmental stewardship. Engineering simulation from ANSYS has proven to accelerate technology development, help identify design mistakes early in the product development process, and reduce testing and experimentation cost.

Attendees of this seminar will learn oil and gas technology drivers and industry research trends and will benefit from technical presentations focusing on application of engineering simulation to design and analyze:

- Subsurface equipment and concepts
- Facilities including separator design
- Sand control
- Pressure vessel design
- RF heating and its application to oil extraction

Register now to take part of the last ANSYS event in the Alberta region in 2012.

Location: Calgary, Alberta
Date: Tuesday, November 20, 2012
Time: 10:00 a.m. – 4:00 p.m.
Venue: Hotel Arts
119 12 Avenue SW
Calgary, AB
Cost: Free with Lunch Provided

Register:
